

ABSTRACT OF THE DISCLOSURE

A paintbrush and can opener combination includes an elongated
5 handle that has a first end and a second end. The second end includes an
elongated forward edge. A plurality of bristles is attached to and extends
away from the forward edge. An elongated plate has an attached end and a
free end. The attached end is positioned within the handle and attached
thereto such that the plate extends outwardly from the first end of the
10 handle. The plate has a bend therein positioned generally between the free
end and the handle.
